

## **Prof. Dr. med. Marten Trendelenburg**

Im Mittelpunkt der Forschungstätigkeit der Forschungsgruppe "Klinische Immunologie" steht die Untersuchung von Pathomechanismen systemischer Autoimmunität, insbesondere die Rolle von Komplement und Autoantikörpern gegen Komplement. Daneben beschäftigen wir uns mit der Rolle von funktionellen Komplementdefizienzen in verschiedenen Erkrankungen. Unsere Forschung bewegt sich dabei im Grenzgebiet zwischen Klinik und Labor. Sie versucht einerseits konkrete klinische Fragestellungen in die experimentelle Forschung einfließen zu lassen und andererseits Erkenntnisse aus dem Labor in den klinischen Alltag zu übertragen.
