

Update Herzinfarktdiagnostik: Challenging Cases

Donnerstag, 04. Mai 2017

Referent: Dr. Patrick Badertscher

Zusammenfassung

- With hs assays for troponin, much **lower cut-off concentrations** are used than with previous-generation assays.
- The hs assays allow **rapid discharge** from hospital and **faster diagnosis** of AMI.
- Clinical guidelines have already included these studies, but **uptake in routine clinical practice is still developing**.
- **Knowledge** about these lower troponin cut-off concentrations and their application needs to be increased.
