Syncope

Donnerstag, 08. März 2018

Referent: Dr. Patrick Badertscher, Jeanne du Fay de Lavallaz

Recommendations Tilt testing

- **Diagnostic criteria:**

- In patients without structural heart disease, the induction of reflex hypotension/bradycardia **with** reproduction of syncope or progressive OH (with or without symptoms) are diagnostic of reflex syncope and OH respectively.
- In patients without structural heart disease, the induction of reflex hypotension/bradycardia **without** reproduction of syncope may be diagnostic of reflex syncope.
- In patients without structural heart disease, arrhythmia or other cardiovascular cause of syncope should be excluded prior to considering positive tilt test results as diagnostic.
- Induction of LOC in absence of hypotension and/or bradycardia should be considered diagnostic of psychogenic pseudo syncope.
